MAKING SECURITY MAKE SENSE

MAKING SECURITY MAKE SENSE

■ At InfoGraphic Systems, we believe we should be more than a superior access control manufacturer — we believe that we should also be your security partner. As a manufacturer, no matter how good the quality of our product, we are only as good as our dealers and end-users believe us to be. That's why at InfoGraphics, we work hard to be not just the best supplier of access control products in the industry, but to exceed your expectations in every aspect of your relationship with us. If your need is for a technologically advanced, feature-rich, reliable access control system, we partner with you to provide you with the best in personal attention and professionalism, and the best software and hardware in the business.

InfoGraphic Systems has been manufacturing access control and security products since 1978. The company

develops all of its own software and hardware and manufactures all of its own products, making it unique amongst access control suppliers.

The InfoGraphics' GEM Series product line includes DIAMOND II, the most sophisticated multimedia Access Control, Alarm Monitoring, Asset Tracking, Photo Badging and Video Management tool available in today's market. When combined with the InfoGraphics' SAPPHIRE and TOPAZ products, DIAMOND II completes the range of the most technologically advanced, cost effective and sophisticated security management systems available anywhere. These products not only address the needs of the security professional, but they also offer a friendly environment to the IS departments of our various customer organizations.

Sun Microsystems

"Sun Microsystems was able to find what we needed to implement our sophisticated security system with InfoGraphic Systems," said Director of Security, Joe Chiaramonte. "Not only did we receive scalable software that could be customized to meet our rapidly expanding security needs, but we also received all of the necessary hardware from InfoGraphic Systems. The InfoGraphics' system has proven its flexibility in adapting to all of our requirements, and has allowed us to stay at the leading edge of technology."

TECHNOLOGY & ENGINEERING

■ InfoGraphic Systems has always been a technology leader. Since it first began supplying access control systems to the security industry in 1978, the company has accumulated an impressive list of industry firsts, not the least of which was

the development of the first 32-bit application software for access control a full 10 years before any other company in the market, and the implementation of the first Enterprise (Multiple Server) software solution for access control, a full three years before any other company. This wealth of experience has earned us a reputation for the legendary robustness and reliability of our products.

InfoGraphics' innovative engineering staff leads the research and development of new products. Our research and development laboratories utilize prototyping, development and test equipment that incorporates the latest proven advances in technology. Our engineering staff works aggressively to create revolutionary, user-friendly access control products. They design and produce many custom software features, special hardware products and sophisticated communications systems to meet individual customer needs. In fact,

individual customer needs have been a driving force in the development of our products. As a result, our customers get products that not only meet, but exceed their unique and specialized requirements.

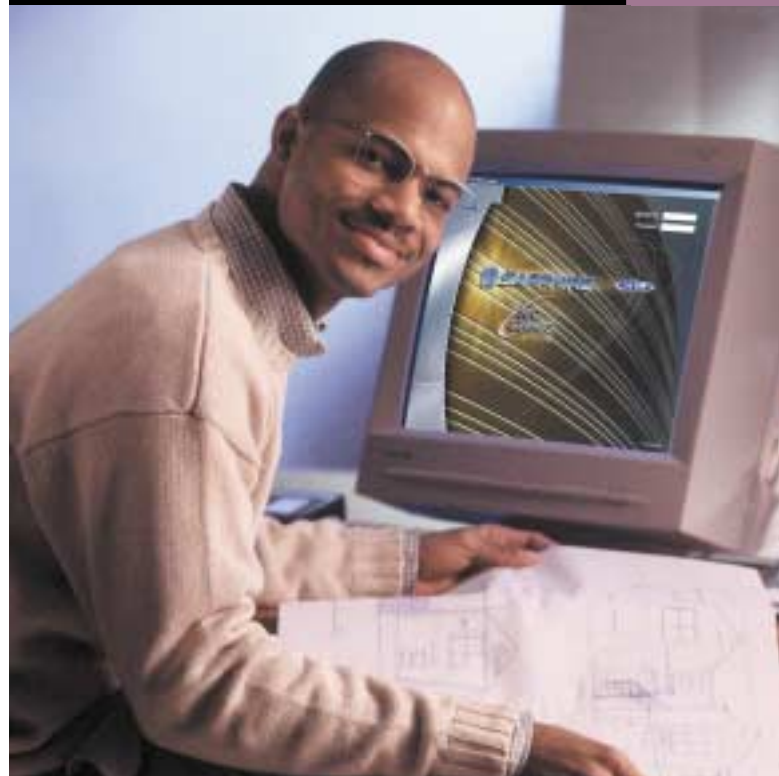

■ InfoGraphic Systems designs and manufactures all of the access control and security products at our corporate headquarters in Garden Grove, California. Our production facilities utilize manufacturing equipment and techniques that generate a consistent and reliable product line. All product testing is conducted automatically through computerized test routines, and also manually, to confirm full system functionality and operation.

InfoGraphics also utilizes an employee quality program that instills stringent quality standards and continuous improvement to the work process. These standards are reflected in the quality and robustness of our products.

MANUFACTURING

Alaska Fiber Star

"The product is proving to be very robust," said Steven Brown, senior network engineer for the Alaska region. "The InfoGraphics' system is extremely reliable."

SUPPORT & COMMITMENT

■ The InfoGraphics' staff is dedicated to the service of our customers and believes in providing the highest quality customer support to assure complete satisfaction. Customers can feel comfortable knowing they are getting outstanding support when they purchase a system.

InfoGraphics' Technical Support and Customer Service departments remain the best and most helpful in the industry. Our Customer Service personnel listen to your needs, and provide immediate and accurate answers to your questions. And if you find a reason to call Technical Support, the highly trained Technical Support team will eagerly assist you by finding answers quickly.

If product training is needed, contact the Training Department to see when classes are available. Enjoy InfoGraphics' comprehensive, vigorous training classes, designed to teach you exactly what you

need to know to install, operate and maintain a secure system. Whether you are a dealer or end-user, InfoGraphics tailors the classes to meet your needs.

InfoGraphics' Application Engineering department offers assistance in the preparation of complex technical proposals and bid responses, spelling out exactly what you need in order to respond to specifications. Nothing goes unanswered and potential customers are provided with all the information necessary to make an informed decision.

MISSION

■ To continue to set the highest standard of engineering and manufacturing quality in meeting the needs of our customers, and be recognized as the company which provides the highest standard of support to its customers.

Joe Maskrey, CEO

"InfoGraphic Systems prides itself on providing superior products that meet the needs of our customers and which outperform those of our competitors. That pride is carried through to Customer Service, Technical Support and Training, giving our customers exemplary assistance throughout the access control buying experience."
